

Best Beach & Sport Sunscreens

The best sunscreen is a hat and a shirt. No chemicals to absorb through the skin, no questions about whether they work. But when you can't get away from exposing your skin to the sun, use EWG's top-rated sunscreens to provide broad-spectrum (UVA and UVB-sunburn) protection with fewer hazardous chemicals that penetrate the skin. Sunscreen makers are awaiting FDA approval for a wider selection of UVA-blocking chemicals. In the meantime, all top-rated products contain either zinc or titanium minerals to help cut UVA exposures for sunscreen users.

Choose from among our top-rated sunscreens for broad spectrum protection with fewer hazardous ingredients. And [follow our sun safety tips](#) to protect your skin for a lifetime.

Top Sunscreens

Our top-rated sunscreens all contain the minerals zinc or titanium. They are the right choice for people who are looking for the best UVA protection without any sunscreen chemical considered to be a potential hormone disruptor. None of the products contain oxybenzone or vitamin A and none are sprayed or powdered.
